

Zic0n

CIVIL • TRANSPORTATION • STRUCTURAL • GEOTECHNICAL

Ideas. Engineered.

Practical engineering support, built around the project.

Zic0n is a San Diego-based engineering practice supporting public infrastructure and private development projects. We work with owners, consultants, architects, developers, and contractors when they need additional engineering support or a team that can take on a defined scope of work.

CORE CAPABILITIES

Civil & Land Development

Grading • drainage • stormwater • site access • utility coordination • SWQMP support • permit processing • agency comments • civil plans

Structural Engineering

Structural analysis and design • concrete and steel structures • foundations • retaining structures • building and site structures • rehabilitation and repair

Pavement & Materials

Pavement evaluation and rehabilitation • asphalt materials • RAP • sustainable pavement materials • pavement design • materials performance and technical analysis

Transportation & Roadway

Roadway and highway design • geometric improvements • ramps and interchanges • ADA improvements • roadside and safety improvements • rehabilitation • plans, quantities and estimates

Geotechnical Engineering

Geotechnical evaluation • foundation recommendations • earthwork and grading • slope and retaining-wall support • pavement and subgrade evaluation • construction support

Subconsultant & Project Support

Design production • calculations • plan preparation • engineering documentation • QA/QC support • agency coordination • peak-workload support

HOW WE CAN HELP

Zic0n can take on a complete engineering scope or work as part of a larger project team. For consulting firms, we can help with subconsultant scopes, task orders, design production, calculations, plan preparation, agency coordination, or simply additional engineering support when the workload gets heavy. The goal is simple: understand what the project needs, put the right people on it, and get the work done.

Ahmed Abdalla, Ph.D., P.E.

Founder | Civil Engineer

California-licensed Civil Engineer with experience in transportation and roadway design, public infrastructure, private development and grading, construction, pavement rehabilitation, and pavement materials. Ph.D. in Civil Engineering from Temple University.

Specialty disciplines are delivered with appropriately qualified and licensed professionals responsible for their respective engineering services.
